

Based on the analysis of commits from the OpenStack Neutron project over the past three years, the following five modules emerged as the most actively changed:

- tests - 4176 commits
- plugins – 1392 commits
- db – 1119 commits
- agent – 975 commits
- conf – 622 commits

The corresponding bar chart gives a visual representation of the commit frequency by module. This highlights where the most substantial changes, enhancements, or fixes are happening in the project.
